AUTHOR INDEX TO VOLUME 15

Issue	*Page*		
3	291	Akylas, V.R.	Muonic atom cascade program.
5	437	Anderson, J.	A plotting package for visually comparing theoretical and experimental results.
3	165	Auerbach, E.H.	A-THREE: a general optical model code especially suited to heavy-ion calculations.
1	125	Banuelos, A.	A program for calculating the angular distribution of nonrelativistic Bremsstrahlung intensity.
3	161	Bardsley, J.N.	The null-event method in computer simulation.
5	387	Beatham, N.	A new program for calculating matrix elements of one-particle operators in jj-coupling.
5	437	Beckwith, R.C.	A plotting package for visually comparing theoretical and experimental results.
3	259	Braunschweig, D.	II. Reduced SU(3) matrix elements.
3	153	Chlouber, C.	Accurate computation of fourth-order vacuum polarization.
1	23	Crees, M.A.	IMPACT: a program for the solution of the coupled integro-differential equations of electron-atom collision theory.
5	351	De Jagher, P.C.	NULLIJN: a program to calculate zero curves of a function of two variables of which one may be complex.
1	97	Douglas, R.J.	INTERACTIVE POSITRONFIT: a new version of a program for analysing positron lifetime spectra.
1	1	Ford, B.	Parameterisation of the environment for transportable numerical software.
1	5	Garpman, S.	Statistical test for pseudo-random number generators.
5	325	Gliss, B.	Design principles of a resource sharing real-time system.
3	275	Godefroid, M.	An adaptation of ACRZ to calculate electric quadrupole oscillator strengths.
5	387	Grant, I.P.	A new program for calculating matrix elements of one-particle operators in jj-coupling.
5	401	Hansen, F.Y.	I. A computer program for normalization and instrument correction of neutron diffraction data on non-crystalline materials to obtain the static structure factor.
5	417	Hansen, F.Y.	II. A computer program for calculation of parameters necessary for the computation of reliable pair distribution functions of non-crystalline materials from limited diffraction data.

Issue	*Page*		
5	431	Hansen, F.Y.	III. A computer program for calculation of reliable pair distribution functions of non-crystalline materials from limited diffraction data.
5	335	Kaiser, F.	Computer aided laboratory instruction.
5	329	Karlov, A.A.	Software for graphic display systems.
5	341	Kolpakov, I.F.	CAMAC high energy physics electronics hardware.
3	193	Koshel, R.D.	A finite range coupled channel Born approximation code.
1	107	Lanier, R.G.	A program for calculating gamma-gamma directional correlation coefficients and angular distribution coefficients for gamma rays of mixed multipolarities from partially aligned nuclei.
3	161	Lin, S.L.	The null-event method in computer simulation.
5	375	Linkens, A.	Simulation of ultrasonic degradation of macromolecules in solution.
1	107	Macias, E.S.	A program for calculating gamma-gamma directional correlation coefficients and angular distribution coefficients for gamma rays of mixed multipolarities from partially aligned nuclei.
1	107	Mann, L.G.	A program for calculating gamma-gamma directional correlation coefficients and angular distribution coefficients for gamma rays of mixed multipolarities from partially aligned nuclei.
1	97	McKee, B.T.A.	INTERACTIVE POSITRONFIT: a new version of a program for analysing positron lifetime spectra.
1	131	Mirman, R.	Generation of the Clebsch-Gordan coefficients for Sn.
1	147	Mirman, R.	Functions on tableaux and frames of the symmetric group.
3	283	Morando, M.	CARLA: a code to calculate the population of high spin states through compound nucleus reactions.
5	437	Moriarty, K.J.M.	A plotting package for visually comparing theoretical and experimental results.
5	303	Nadrchal, J.	Preface, programme and organizing committees.
3	193	Nagel, P.	A finite range coupled channel Born approximation code.
5	375	Niezette, J.	Simulation of ultrasonic degradation of macromolecules in solution.
5	317	Pelz, K.	The programming language PEARL and its implementation.
5	305	Penney, B.K.	Computer system architecture for laboratory automation.
5	387	Pyper, N.C.	A new program for calculating matrix elements of one-particle operators in jj-coupling.
1	5	Randrup, J.	Statistical test for pseudo-random number generators.

Issue	*Page*		
5	443	Salin, A.	Erratum. Calculation of wave-functions and collision matrix elements for one-electron diatomic molecules.
3	153	Samuel, M.A.	Accurate computation of fourth-order vacuum polarization.
3	247	Saraph, H.E.	Fine structure cross sections from reactance matrices: a more versatile development of the program JAJOM.
3	283	Savelli, C.	CARLA: a code to calculate the population of high spin states through compound nucleus reactions.
1	131	Schindler, S.	Generation of the Clebsch-Gordan coefficients for Sn.
1	147	Schindler, S.	Functions on tableaux and frames of the symmetric group.
5	347	Schraml, J.	On-line and real-time processing in radio astronomy.
1	23	Seaton, M.J.	IMPACT: a program for the solution of the coupled integro-differential equations of electron-atom collision theory.
1	85	Smith, K.	SUBMMW: a theoretical model to predict CW sub-millimeter wave laser performance.
3	227	Srinivasa Rao, K.	New Fortran programs for angular momentum coefficients.
5	335	Staudenmaier, H.M.	Computer aided laboratory instruction.
1	107	Struble, G.L.	A program for calculating gamma-gamma directional correlation coefficients and angular distribution coefficients for gamma rays of mixed multipolarities from partially aligned nuclei.
5	437	Tabor, J.H.	A plotting package for visually comparing theoretical and experimental results.
5	375	Vanderschueren, J.	Simulation of ultrasonic degradation of macromolecules in solution.
3	227	Venkatesh, K.	New Fortran programs for angular momentum coefficients.
1	97	Virtue, C.J.	INTERACTIVE POSITRONFIT: a new version of a program for analysing positron lifetime spectra.
3	291	Vogel, P.	Muonic atom cascade program.
3	237	Von Meerwall, E.D.	A Fortran program for routine analysis of magnetic susceptibility data.
1	23	Wilson, P.M.H.	IMPACT: a program for the solution of the coupled integro-differential equations of electron-atom collision theory.
